# Smart Mine Operations Dashboard
+
+STORYBOARD - Automated Mine Ventilation & Safety Dashboard
+Role: Storyteller
+Persona: Matt, a ventilation/ IT technician at an underground nickel mine
+
+-----
+PANEL 1 - The Problem
+-----
+Setting: Mine surface control room, early morning.
+Action: Matt sits at a desk surrounded by radios and paper logs.
+A radio crackles with a level supervisor asking whether it's
+safe to send a crew back into a section after a blast.
+Thought bubble: "I'm guessing based on a stopwatch and a gut feeling."
+Purpose: Establishes the problem - no real-time visibility into
+air quality, and re-entry decisions rely on manual timing/radio
+check-ins instead of actual sensor data.
```

```
+
+-----
+PANEL 2 - Opening the Dashboard
+-----
+Setting: Same control room, now with a tablet/monitor showing
+the Grafana dashboard.
+Action: Matt pulls up the live view - gas concentration,
+airflow, and fan status for every level, updating in real time.
+Thought bubble: "Now I can actually see what's happening down there."
+Purpose: Introduces the app and its core value - real-time,
+level-by-level visibility instead of guesswork.
```

```
+
+-----
+PANEL 3 - A Blast Event Fires
+-----
+Setting: Dashboard view, mid-shift.
+Action: A blast event alert appears on screen. The ventilation
:█
